batteries

If you want this to last "several days" (let's say two), then the allowable power is about 2800 kW, not 30kW. $30 \text{ kW} / 3744$ is 8 watt per cell, or about 2 amps. While this is not, by itself, an unreasonable number, it makes no sense given your stated battery capacity. You'd expect a lithium ion cell to handle at least a 1C rate, or 5 amps.
