

European Solar Energy Storage

What happens to solar energy on july 1 2017

Overview

In July 2017, a judge recommended that the Arizona utility commission approve a settlement between APS and solar companies that pays new rooftop solar customers \$0.129/kWh for exported energy (locked in for 10 years), and the rate would decline no more than 10% annually.

In July 2017, a judge recommended that the Arizona utility commission approve a settlement between APS and solar companies that pays new rooftop solar customers \$0.129/kWh for exported energy (locked in for 10 years), and the rate would decline no more than 10% annually.

Original article text as follow: Around noon Eastern Standard Time on July 1st, the Senate voted on and passed its version of the “One Big Beautiful Bill,” the all-encompassing policy vehicle for the Trump administration.

What happened instead was a record year for solar energy globally. Even in the U.S., there's high demand for solar panels as installers stockpile solar modules ahead of potential import.

Tax credits for solar, wind and EVs fare differently in the House and Senate bills. The industry says some changes would be devastating, but the fight isn't over.

In 2017, solar use grew more than coal, pointing to falling prices and less restrictions worldwide. Solar is also being used to manage power needs during peak times, reducing reliance on traditional energy. When does the solar tax credit end?

If you're interested in solar for your home, here's what you need to know: The consumer tax credit (25D) ends at the end of 2025. Homeowner-owned solar systems need to be installed by Dec. 31, 2025 to claim this 30% tax credit before it's gone.

Can you get a solar tax credit if you install solar?

July 4 update: President Trump signed the “One Big Beautiful Bill” into law.

Residential solar and/or systems installed by December 31, 2025 will still qualify for the 30% consumer solar tax credit (25D). Beginning in 2026, there will be no federal solar tax credit for homeowners to claim.

Should you consider a 'excise tax' if you're going solar?

The key takeaway is that if you're going solar, consider whether vendors will be around in future years to honor warranty claims, etc. The "excise tax" proposed in the updated Senate text is out. This provision appeared in the Senate draft proposed on June 30 and posed a serious financial risk to future solar and wind projects.
