When was solar technology first used?

Some of the earliest uses of solar technology were actually in outer space, where solar was used to power satellites. In 1958, the Vanguard I satellite used a tiny one-watt panel to power its radios. Later that year, the Vanguard II, Explorer III, and Sputnik-3 were all launched with PV technology on board.

What is the history of solar energy?

The history of solar energy is a fascinating journey that dates back thousands of years, revealing humanity's early understanding and utilization of the sun's power. Ancient civilizations recognized the sun as a vital source of energy, and they developed various practices to harness its warmth and light.

Who invented solar power?

In 1973, Elliot Berman founded Solar Power Corporation, a subsidiary of Exxon, and made huge strides in the cost of solar cell production. After 1973, oil companies used the extra profits to advance solar innovation and production in an effort to make their own organizations more efficient.

When did solar panels become possible?

Although solar panel production became feasible in the 1960s and 1970s. Technology was still too expensive for most people at the time. To lower the price of solar energy, researchers kept working on new technologies. The first P-N junction cell was created after semiconductors gained popularity.

When did solar energy become a standard power system?

As NASA pushed further out into the solar system in the 1970s, photovoltaics became the standard power system for its spacecraft and remains so today. Back on Earth, solar energy technology continued to advance gradually through the mid-20th century but remained uncompetitive with cheap, readily available fossil fuels.

How did early solar technology contribute to the development of solar energy?

Early solar technologies, such as burning mirrors and basic solar thermal systems, illustrated the potential of solar energy during the industrial age. They showcased the ingenuity of early scientists. These innovative methods effectively harnessed sunlight.
