# Wholesale price of solar power storage box in Chile

## Overview

---

How much battery storage does Chile have?

Chile has an operational installed capacity of approximately 1GW in batteries, and another 3GW is under construction. Battery storage has been largely financed by bank lending in recent years, but we believe larger projects could increase the scope for bond financing.

Can co-located batteries help solar plants capture better power prices?

Co-located batteries, like Engie S.A.'s BESS Coya, will help solar plants capture better power prices by charging the batteries during solar hours when power prices are very low and dispatching energy during peak hours when prices are close to USD 100/MWh.

How do energy storage projects make money?

We expect energy storage projects to benefit from stacking, or diversifying, their sources of revenue. Many projects will derive 40%-50% of their revenue from relatively stable capacity payments. The remaining revenues will likely come from contracted power purchase agreements or arbitrage.
