Why apple and google are moving into solar energy

Overview

Google and Apple recently announced they have both reached 100% renewable energy, and they're leading an international corporate trend spurring new wind and solar investment, opening up new power markets, cleaning up supply chains, and saving money.

Google and Apple recently announced they have both reached 100% renewable energy, and they're leading an international corporate trend spurring new wind and solar investment, opening up new power markets, cleaning up supply chains, and saving money.

By buying into the idea of solar energy, these companies decrease their carbon footprint for the sake of others to follow. The essence of a lot of tech companies— including sustainability— is now a key goal. But, their customers and their investors do know it. This therefore makes solar energy the.

America's technology corporate giants have led the corporate renewables procurement trend, but two of the biggest names in tech just reached a new mark: Apple and Google are now both 100% powered by renewable energy . That means the company behind the ubiquitous iPhone and iPad as well as the. Why does Apple run on solar?

Because it turns out that Apple doesn't actually run their facilities on solar. Instead, they feed the unreliable, stop-and-go power from their on-site solar panels into the local utility power network, making the system less reliable and more expensive.

Does Apple have a solar project in Michigan?

In the U.S., Apple is investing in a portfolio of solar projects across Michigan, with construction underway to bring 132 megawatts of clean energy online later this year.

Why is Apple investing in solar projects in India?

To address its growing corporate operations in India, Apple has also embarked

on a joint venture with leading renewable developer CleanMax to invest in a portfolio of six rooftop solar projects with a total size of 14.4 megawatts.

Does Apple sell energy from a solar farm?

Most people think of Apple as a company that makes phones, computers and smart watches – not an energy provider. But in August all of that changed when the firm was given permission to sell energy from a Californian solar farm that it acquired last year.

How does apple's green bond work?

Last year, Apple allocated proceeds from its 2019 Green Bond toward new clean energy projects like the new solar projects in Michigan and the IP Radian Solar project in Texas, support for the Supplier Clean Energy Program, and investments in high-quality carbon removal through the Restore Fund.

Does Apple have a solar project in Spain?

In Spain, Apple has partnered with international solar development platform ib vogt on an investment that will generate 105 megawatts of solar power when the project comes online by the end of 2024.
