

## European Solar Energy Storage

# Will duke energy pay back excess solar

## Overview

---

Instead of a flat rate, Duke customers with solar will shift to a time-of-usage system, which compensates them for excess energy the panels produce based on the cost of energy at the time it's produced. The timing for customers shifting to that system depends on when they.

Instead of a flat rate, Duke customers with solar will shift to a time-of-usage system, which compensates them for excess energy the panels produce based on the cost of energy at the time it's produced. The timing for customers shifting to that system depends on when they.

CHARLOTTE — Starting Oct. 1, North Carolina is changing the way owners of residential solar panels get paid for the energy they produce, and, specifically, how much Duke Energy will pay for it. Since 2000, Duke customers with residential solar panels have been able to take advantage of something.

Duke Energy will soon be allowed to charge some solar customers more, and pay less to buy excess power from people and businesses with solar panels. North Carolina solar companies and climate activists say the environment and the economy will suffer, unless state courts stop the changes. Beginning.

The problem is that Duke Energy doesn't pay for any excess electricity I generate. In June, they wipe the slate clean, and excess generation gets zeroed out. I tried to contact my state legislators, but they were no help. Any ideas about how I can get Duke to pay for my overage?

If you look at the.

Starting Oct. 1, customers with Tier 1 solar panel systems (generating 10 kW or less) will have to pay a minimum of \$10 a month for electricity, even if they don't use any from the grid. Duke Energy Carolinas (DEC) customers will pay 28 cents per kW each month, while Duke Energy Progress (DEP).

The state of North Carolina offered full retail net metering since 2000, meaning that any excess energy that a solar customer generates is credited to their bill at the utility's full retail rate of electricity. At the end of a billing

period, any net excess generation (NEG) credits a solar.

Customers utilizing NMB will be compensated for the energy they export to the grid at the annualized avoided cost rate, called the “net excess energy credit.” The NMB also features a non-by-passable charge and minimum monthly bill, and customers are allowed to retain the Renewable Energy Credits. Will Duke Energy pay for residential solar panels?

CHARLOTTE — Starting Oct. 1, North Carolina is changing the way owners of residential solar panels get paid for the energy they produce, and, specifically, how much Duke Energy will pay for it. Since 2000, Duke customers with residential solar panels have been able to take advantage of something called net metering.

Does Duke Energy offer solar rebates in North Carolina?

Duke Energy offers rebates to North Carolina customers who want to install a solar panel system. For homeowners, the program offers a \$0.60/Watt rebate for systems up to 10 kilowatts. The benefit is equivalent to \$3,600 for a 6 kilowatt (kW) system. Nonresidential customers also have access to rebates of \$0.50/Watt to \$0.75/Watt.

Is Duke Energy overpaying solar owners?

Like utility companies across the country, Duke Energy argued the company was overpaying solar owners for their power. Duke did a study on their net metering costs and found residential solar was producing the most energy at times like midday when energy usage is low.

What if Duke bought solar energy from other power producers?

If Duke was buying from other power producers, the utility would be paying far less for that energy but because of the net metering rules, they had to purchase the solar energy at the higher, guaranteed rate. According to spokesman Randy Wheelless, that extra cost was getting passed on to Duke’s non-solar customers.

Does Duke offer a time-of-use solar system?

Instead of a flat rate, Duke customers with solar will shift to a time-of-usage system, which compensates them for excess energy the panels produce based on the cost of energy at the time it’s produced. The timing for customers shifting to that system depends on when they installed their solar.

## Why did Duke Energy change solar rates in North Carolina?

PAST COVERAGE: Duke Energy argued the new rates were necessary to ensure North Carolina's rooftop solar customers are paying their fair share to be a part of the energy grid. The appellants in the case argued the NC Utilities Commission approved the changes based on a study Duke Energy conducted, rather than an independent NCUC study.
